

If you thought your life was complex, you were right.

It's been recently discovered that there are more than **three billion** pieces of information contained in human DNA. Meaning, a single DNA cell of the human body contains as much information as the *Encyclopedia Britannica*—all thirty volumes of it—three or four times over. In everyday experience, we know that objects with a high information content—books, computer disks, musical scores—are products of intelligence. Isn't it reasonable to conclude, by analogy, that the DNA molecule is likewise the product of an intelligent agent? To see some inspiring evidence for the existence of a loving Creator whom you can know personally, see the feature article "**Is There A God?**" at www.EveryStudent.com.
